

it's time to design for

IPHONE DUO

10 THINGS YOU NEED TO KNOW

Every code snippet from the video, in order.

by Craig Clayton

01 Two Size Classes

```
@Environment(\.horizontalSizeClass) var hSize
```

02 Controls Move to the Side

```
.toolbar {  
    ToolbarItem(placement: .topBarLeading) {  
        Button("Filter", systemImage: "line.3.horizontal.decrease") { }  
    }  
}  
.axisBehavior(.verticalPreferred)
```

03 Offset vs. Center

```
VStack {  
    // your content  
}  
.padding(.leading, geo.safeAreaInsets.leading)
```

04 The Fold Displaces Content

```
.onGeometryChange(for: [ReservedRegion].self) { proxy in  
    proxy.reservedRegions(kind: .division, options: .includeInactive)  
}
```

05a Use the Space Deliberately

Split

```
NavigationSplitView {  
    ShowListView()  
} detail: {  
    ShowDetailView()  
}
```

05b Use the Space Deliberately

Sidebar

```
TabView {  
    // tabs  
}  
  
.defaultTabBarPlacement(.sidebar)
```

05c Use the Space Deliberately

Reflow

```
AnyLayout(hSize == .regular  
    ? AnyLayout(HStackLayout())  
    : AnyLayout(VStackLayout())) {  
    PosterView(); MetadataView()  
}
```

06 Consistency Across Poses

Anti-pattern — what to avoid

```
if pose == .closed {  
    BasicView() // missing features  
} else {  
    FullView() // different hierarchy  
}
```

07 Sheets Behave Differently

```
.sheet(isPresented: $showDetail) {  
    ShowDetailSheet()  
}  
// placement, centering, slide-over — all automatic
```

08 Split View Safe Areas

```
GeometryReader { proxy in  
    proxy.safeAreaInsets.leading  
    // do not assume this equals  
    proxy.safeAreaInsets.trailing  
}
```

09 Grids Prefer Even Columns

```
let columns = reservedRegions.contains(  
    where: { $0.kind == .division })  
? Array(repeating: GridItem(.flexible()), count: 2)  
: Array(repeating: GridItem(.flexible()), count: 3)
```

10 What Apple Doesn't Prescribe

No code — this point is about the absence of official guidance (no confirmed breakpoints, no Duo-specific type scaling, no official Split View size class).
